## Getting Started

### Power On/Off

Press and hold the Red Record button for 3 seconds. The unit will give an audible chirp and the white LED indicator will illuminate, indicating that the camera is on standby. Camera will enter into standby mode. In standby mode, the white LED indicator stays ON. To power off, press and hold the Record button for 3 seconds, the unit will give 2 audible chirps and white LED indicator will turn off.

### Recording From Standby

Press the Red Record button to start recording. The unit will give one audible chirp and the green LED indicator will flash consistently, indicating that the camera is now recording. When the camera is recording, press the red record button to stop recording. The unit will give two audible chips and the green LED indicator will turn off, the white LED indicator will turn back on.

### Photo Taking

Photograph Feature In standby mode, press the Photo button to take photos. The unit will give one audible chirp and the white LED indicator will blink once.

### Pre-Record

When the camera is in standby mode, long press the photo button to switch to pre-record. The white LED indicator on top of the camera will change to solid green and the camera will pre-record for 30 seconds. To stop pre-recording, long press the photo button.

### Insufficient Storage

When free storage space is less than 5%, the green LED will change to red whilst still recording.

### Viewing Footage

Once you have taken a recording and would like to view your footage simply plug your camera into the single dock provided (or multi dock if applicable) and connect this to your PC using the USB C cable provided with the camera. Your footage will then appear for you on the PC in your file explorer and you can view the footage using any standard media player
